

Leaders in sustainable biosecurity for Tasmania

Island Fresh Produce and its independent grocer members are proud members of the Tasmanian community, committed to protecting the unique environment we live in.

Island Fresh Produce supports sustainable chemical-free treatments as a preferred option to meet Biosecurity Tasmania requirements. This means X-Ray treatment is now used as a common alternative to Methyl Bromide fumigation and Dimethoate dips.

X-ray treatment, also known as phytosanitary irradiation is a modern chemical-free, fumigant-free and Ozone positive treatment. This protects our local farmers so that they can continue to supply these same stores during the local harvest season.

For more information on biosecurity requirements, you can contact Biosecurity Tasmania by phone (03) 6165 3777 or email BiosecurityTasmania@dpiw.tas.gov.au
